

THE GUARDIAN LINE

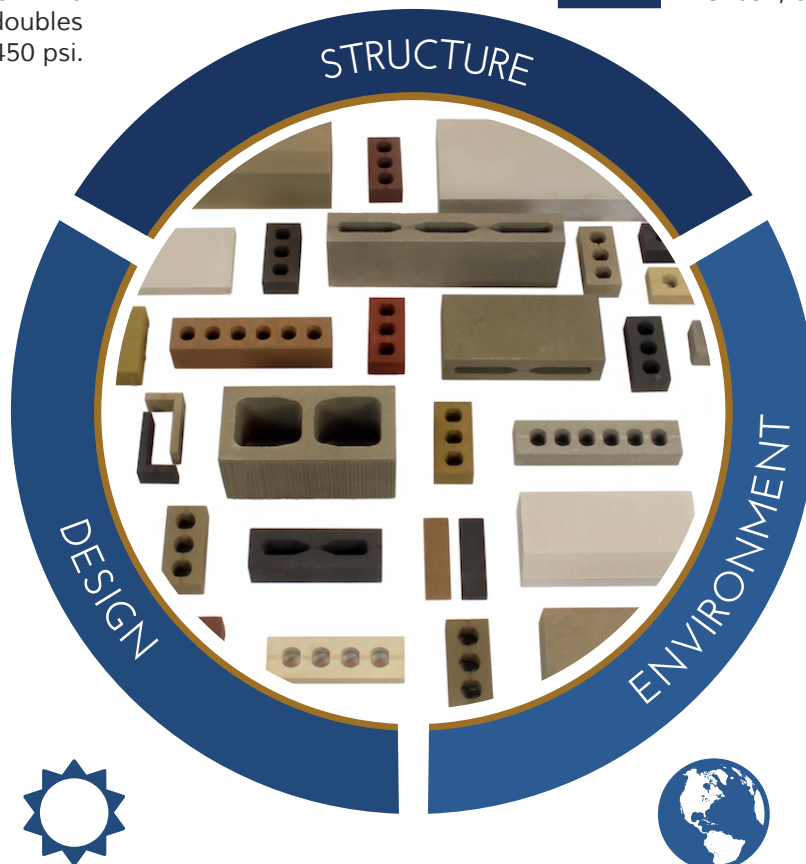

Guardians of Structure, Design, and the Environment

Our brick products exceed the ASTM C55 standards for strength and absorption. The compressive strength doubles the standards at over 6450 psi.

Our products meet and exceed ASTM C55, C90-16a, C1634, and C936 standards

Saturn Materials' through-body color is out of this world! Our products are available in a variety of colors.

We proudly use a green manufacturing process that only expels water vapor.

Our products meet the requirement for non-fading colors under ASTM C979 and C979M.

We use fly ash, a byproduct of coal-fire power plants and cement in our products. This eco-friendly process turns a waste product into useful building material.

The Guardian Line comes in a wide range of colors. Premium colors available on request.
